Installation Recommendations	31

Economical to install, use

In addition to low material cost and nominal erection cost, GRIP STRUT™ safety grating also helps save with its long-lasting, rust-resisting materials and finishes. Standard mill-galvanized finish resists corrosion to provide lasting surfaces. High-strength aluminum and Types 304 and 316L stainless steel are available to provide maximum corrosion resistance. Black unpainted steel available for installations requiring hot dipped galvanized finish after fabrication. These light weight but brawny panels permit substantial reduction in structural steel requirements. Open design is self-cleaning and virtually maintenance free.

Safer, serrated surface

Grips soles securely in all directions. The non-slip GRIP STRUT surface is ideal for inside or outside locations where mud, ice, snow, oil and detergents can create hazardous walking conditions. Openings are small enough to catch most falling tools and other dangerous objects.

Open design, convenient cleaning

Permits quick drainage of fluids, chips, grease and mud. Any ice accumulation shears easily under normal foot pressure. Open design allows convenient access for cleaning, and is easily cleaned with brush, liquid or air spray to help minimize overall maintenance.

High load capacity, long life

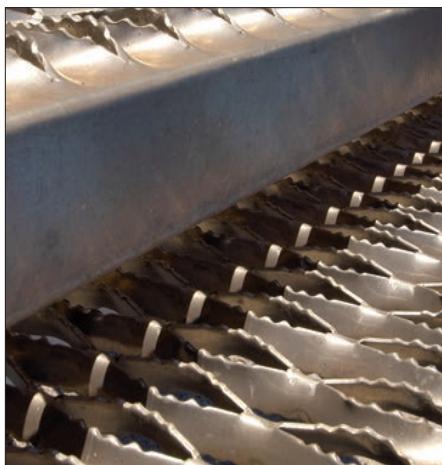

High strength-to-weight performance is achieved through depth of section and structural design. Bridged struts with integral side channels form a plank that can support loads with minimum transverse and longitudinal deflection. There are no rivets or pressure joints to break or loosen. This sturdy construction provides the advantages of heavy load-carrying capacity with minimal deflection; rugged durability with longer-lasting performance.

Fast Installation

Light, easy-to-handle planks make installation simpler and quicker. They can be handled by one man. Most sections are rapidly bolted, clamped or welded into place, easily field-cut at virtually any angle, or fabricated to adapt to field conditions. Several attachment devices permit fastening to most existing surfaces; allow fast installation or disassembly.

Versatile in application

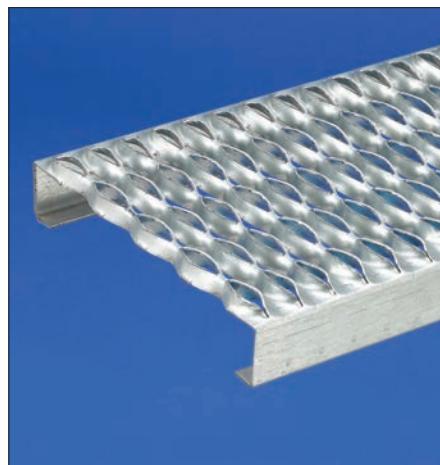

A variety of standard widths and channel heights combine with numerous non-standard shapes and sizes to meet almost any requirement of strength, size, durability, weight, finish, appearance and application. GRIP STRUT safety grating combines safety and durability with ease of fabrication and versatility. One piece construction with no welds or rivets to fail, minimizes need for plant fabrication. Special shapes and forming can be accomplished to suit unusual requirements.

Close-up of standard pattern

Standard serrated surface

Non-serrated surface also available

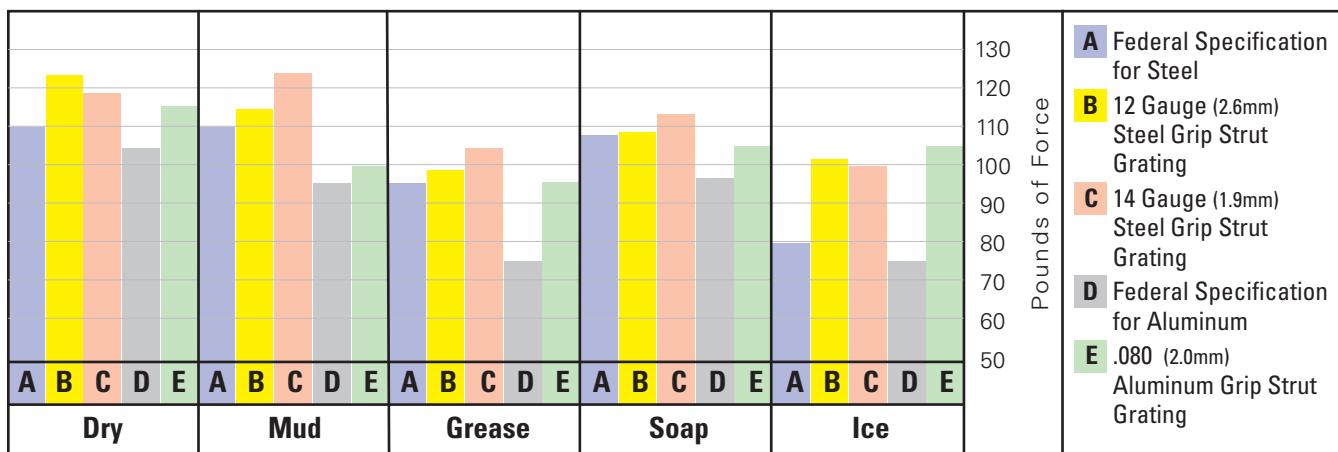

Tested by an independent laboratory for slip resistance according to standards and methods established by Federal Specifications RR-G-1602D, GRIP STRUT™ safety grating exceeds all requirements of this specification.

- The standards were exacting - five shoe sole materials tested in three directions under five conditions: dry, greasy, muddy, soapy and icy. GRIP STRUT safety grating tested more slip-resistant than similar materials, depending on shoe materials and surface conditions.

In survey after survey, accidents caused by falls are high on the list of disabling and lost-time injuries and death. In fact, statistics from many states rate this type of accident second as the cause for industry's loss of manhours and lower productivity. As proved in the test described above, GRIP STRUT safety grating substantially reduces this kind of accident. In addition, the hazard of falling objects is minimized by the shape and size ($1\frac{7}{8}'' \times 1\frac{11}{16}''$) of the surface openings.

Test Performance – Slip Resistance vs. Federal Specifications

Values determined in accordance with standards for slip-resistance established by Federal Specification RR-G-1602D. The values indicated are an average of values obtained for five sole materials (leather, boot rubber, shoe rubber, Neolite®† and Hypalon®†) tested in three directions (longitudinally, transversely and diagonally) for the surface conditions noted. Values are in pounds of force necessary to move a 175 pound load one inch across the surface of grating.

† Mark shown is the property of its respective owner.

General Load Information

How To Read Load Tables

To select size of GRIP STRUT™ safety grating, determine load, clear span and deflection requirements. Having this information, select from load tables the appropriate plank to meet job requirements.

Example: Clear span of 4'-0", concentrated load requirement of 300 lbs. at 0.25" maximum deflection.

Select from the tables following:

For 8-diamond, 18³/₄" wide, 2¹/₂" channel, 12 gauge steel which carries a load of 416 lbs. at a 0.18" deflection. This is one size to do the job. Other sizes will carry more load if necessary. For more economical selection, choose the greatest width that will support the load consistent with job requirements and choose deeper channels rather than heavier steel gauges.

GRIP STRUT safety grating will generally carry the same concentrated load, tabulated in lbs. at midspan, for a given span, material gauge and channel height, regardless of width. (See "How load tables were prepared" described below.) The uniform load tables are tabulated in lbs./sq.ft., which accounts for the difference in load capacity shown for various widths. Deflection is in inches.

How Load Tables Were Prepared

The values shown in the following tables are based on actual load tests conducted in accordance with the provisions of the AISI Specification for the Design of Cold-Formed Steel Structural Members, 1986 Edition. To help ensure the safety of the tabulated loads, two aspects of GRIP STRUT safety grating must be considered.

The first consideration is transverse bending in the grating surface, which is referred to as "strut flexure". This occurs when the grating is loaded with either a uniform load or a mid-width concentrated load, and the "struts" (grating surface) deflect relative to the side channels. To determine the allowable strut loads, samples of each grating material and thickness were tested for each plank width. (See Figure 1a below and 2a on the following page). The data resulting from these tests was used to prepare "strut loading" tables, which give allowable loads and deflections considering strut flexure only. These allowable strut loads, along with the results of additional tests performed on 8- and 10-Diamond grating, have been incorporated in the Product Selection/Design Tables on pages 6 through 17.

The second aspect of GRIP STRUT safety grating strength is channel flexure. This occurs when the channels at mid-span of

the plank deflect relative to support points. To verify the performance of the side channels, samples were loaded with concentrated and uniform loads at different spans (see Figures 1b/2b and 1c/2c). To approximate the most severe condition, there were no attachments between the channels and the supports. In cases where spans are shorter, channels deeper and planks wider, strut flexure becomes more critical.

2-, 3-, 4- and 5-Diamond Allowable Load and Deflection Tables

Since 2- through 5-Diamond planks are relatively narrow (less than 1 foot wide), it can be assumed that both side channels effectively support the concentrated load and that the grating surface deflection is negligible. Based upon these assumption, the values in the following Design Tables for 2-Diamond through 5-Diamond have been determined.

Allowable Uniform Load (U)

Values indicated in the rows adjacent to "U" are the lowest of the (1) maximum allowable uniform loads considering channel flexure and (2) maximum grating surface flexure.

Deflection Corresponding to "U"

Deflection values are indicated below the uniform loads and are in the mid-span side channel deflections for the planks carrying the allowable uniform loads (Figure 1c and 2c).

Allowable Concentrated Load (C)

Values indicated in the rows labeled "C" are the lowest of the (1) maximum allowable concentrated load considering channel flexure (Figure 1b and 2b), with both channels effective, and (2) the maximum allowable strut load (C_s) for a 1 foot long sample (Figure 1a and 2a).

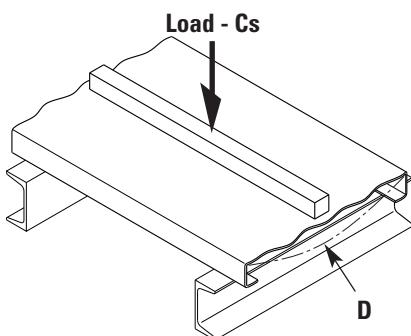

Deflection Corresponding to "C"

Deflection values indicated below "C" values in the tables are the mid-span, side channel deflections produced when the allowable concentrated load is placed at mid-span.

If grating surface deflection should be considered when selecting a product to meet a particular specification, then the deflection of the mid-width of the grating, relative to the side channels, can be calculated using both the data in the Strut Loading Tables (pages 6 -17) and the Load/Deflection Conversion formula on top of following page.

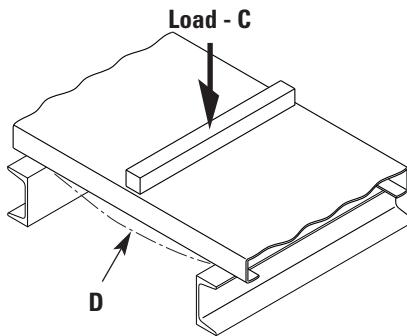

Load data based on yield strength of 33,000 psi for steel, 23,000 psi for aluminum, 35,000 psi for Type 304 stainless steel, and 30,000 psi for Type 316L stainless steel.

General Load Information

Load/Deflection Conversion Formulas

In the elastic range, deflection is proportional to the applied load for both uniform and concentrated loads. This relationship can be used to determine the deflection that any load which is less than the allowable load will produce, as shown in Example A. Also, if desired, the load which will produce a specific deflection can also be determined if the load is in the elastic range as illustrated in Example B.

Example A

What deflection will a 300 lb. concentrated load produce on a plank (catalog number 103012) spanning 5'-0"?

See page 16 for item 103012 at a span = 5'-0" C = 480 lb. D =
D @ 300 lb. = $0.26''/480 \text{ lb.} \times 300 \text{ lb.} = 0.16''$

Example B

If a plank (catalog number 103012) is spanning 6'-0", what concentrated load will produce a 1/4" deflection?

See page 16 for item 103012 at a span = 6'-0" C = 400 lb. D = 0.26"
C @ 1/4" = $400 \text{ lb./0.26''} \times 0.25'' = 385 \text{ lb.}$

8- and 10-Diamond Allowable Load and Deflection Tables

As width increases, grating strut flexure becomes much more important. 8-Diamond and 10-Diamond products are wide enough to require a change in the assumptions used to prepare the 2-Diamond through 5-Diamond Product Selection/Design Tables. No longer will it be assumed that both side channels are equally effective in supporting a concentrated load. In fact, to provide a high level of safety, one side channel will be required to carry 100% of a concentrated load.

Also strut deflection for 8-Diamond and 10-Diamond products may be significant. The most critical case occurs when a concentrated load is located at mid-span and mid-width. To determine how the struts perform under this loading, 3 foot long samples of each material and thickness were tested. For these tests the side channels were continuously supported and loads were applied using a 1 foot long and 1 inch wide bar placed parallel to the side channels at mid-width and at the longitudinal center.

Results of these tests, included in the 8-Diamond and 10-Diamond Product Design Tables, proved the performance of these materials when a concentrated load is applied at mid-span and mid-width. If a concentrated load is to be applied at mid-width at the end of a plank, consult the Strut Loading Tables (pages 6-17).

The following values have been tabulated for 8-Diamond and 10-Diamond grating:

Allowable Uniform Load (U)

Values are given in the rows labeled "U" and are the lowest of the (1) maximum allowable uniform loads considering channel flexure, and (2) maximum grating surface flexure.

Deflection Corresponding to "U"

Deflection values appear in the rows labeled "D", below the "U" values, and are maximum deflections the allowable uniform loads would produce. Maximum deflections will occur at mid-span and mid-width and will be the sum of side channel and grating surface deflections (Figure 1c and 2c).

Allowable Concentrated Load (C)

Values tabulated in the rows labeled "C" are the lowest of the (1) maximum allowable concentrated load considering side channel flexure (with one side channel supporting the entire load — Figure 2b, and (2) the maximum allowable strut flexure (Figure 2a).

Deflection Corresponding to "C"

Deflection values are indicated below "C" values in the table and are deflections the allowable concentrated load will produce at mid-span and at the mid-width. The deflection is the sum of side channel and grating surface deflections

Comparative Performance Tables

8-Diamond Plank — 18³/₄" Width

Note: The data in these tables represents the

performances of both side channels ignoring grating surface performance. These values are not to be used for product selection but should be used when comparisons are being made with other products whose published information does not include grating surface performance. For Product selection and Design Tables, see pages 6 through 17.

Comparative Performance Tables

Note

The data in these tables represents the performances of both side channels ignoring grating surface performance. These values are not to be used for product selection but should be used when comparisons are being made with other products whose published information does not include grating surface performance.

For Product selection and Design Tables, see pages 6 through 17.

Load/Deflection Conversion Formulas

In the elastic range, deflection is proportional to the applied load for both uniform and concentrated loads. This relationship can be used to determine the deflection that any load which is less than the allowable load will produce, as shown in Example A. Also, if desired, the load which will produce a specific deflection can also be determined if the load is in the elastic range as illustrated in Example B.

Example A

What deflection will a 300 lb. concentrated load produce on a plank (catalog number 103012) spanning 5'-0"?

See page 16 for item 103012 at a span = 5'-0" C = 480 lb. D = 0.26" D @ 300 lb. = 0.26"/480 lb. x 300 lb. = 0.16"

Example B

If a plank (catalog number 103012) is spanning 6'-0", what concentrated load will produce a 1/4" deflection?

See page 16 for item 103012 at a span = 6'-0" C = 400 lb. D = 0.26" C @ 1/4" = 400 lb./0.26" x 0.25" = 385 lb.

Fastening Anchors Accessories

Diamond Washer

Field drilling is required.

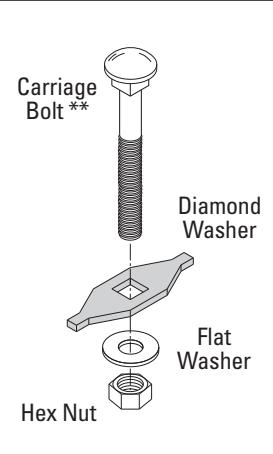

Part Number Includes

(1) Diamond Washer

Order Separately

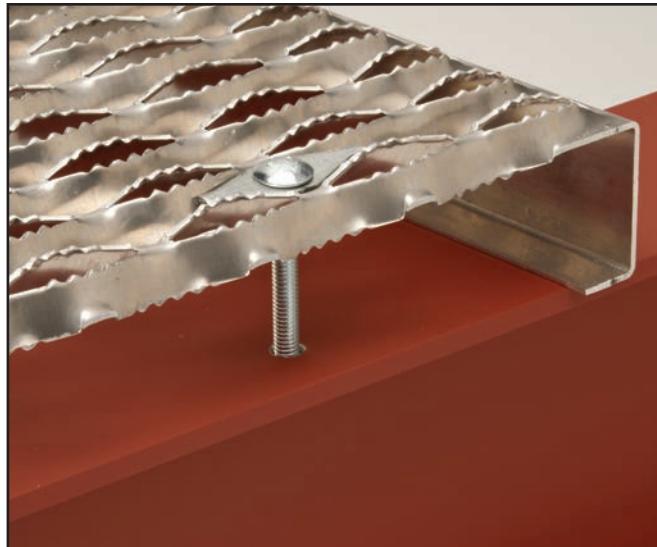

(1) $\frac{5}{16}$ "-18 Carriage Bolt **
(1) $\frac{5}{16}$ " Flat Washer
(1) $\frac{5}{16}$ "-18 Hex Nut

Finish: G-90 mill galvanized
Also available in 304 stainless steel

** Plank carriage bolt lengths = Side Channel Height + 1"
Walkway carriage bolt = $\frac{5}{16}$ "-18 x 2"

Diamond Washer		
UPC Number	Catalog Number	Wt./Ea.
66251626610	12262	0.03

Assembly

1. Align GRIP STRUT planks on I-Beam or other anchoring cross-member.
2. Mark the I-Beam for drilling purposes under a slot near the end of GRIP STRUT plank. Drill a pilot hole.
3. Remove GRIP STRUT plank and drill a finish hole.
4. Replace GRIP STRUT plank. Align diamond washer over the drilled hole. Run the carriage bolt through the diamond washer and I-Beam. Tighten the washer and nut until secure.
5. Test for movement or slippage. If GRIP STRUT planks are not secure, check fastening system for loose or missing parts. Repeat steps 1 thru 4.

Note: Do not walk on GRIP STRUT planks if they are not secure. Serious injury could result.

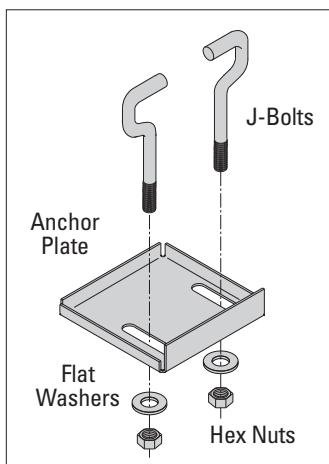

Welding

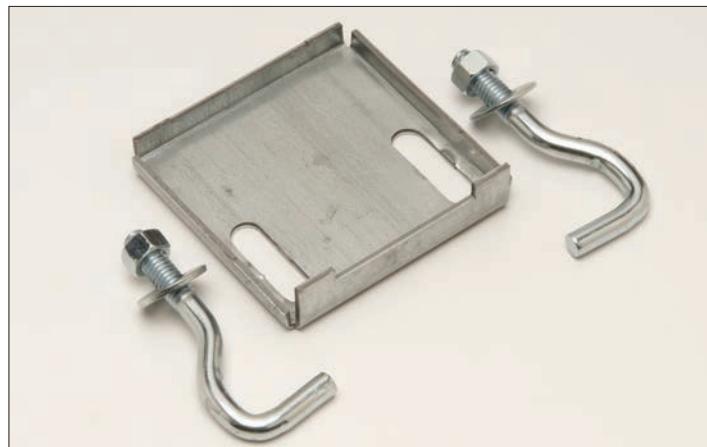

A common method of fastening safety grating is welding. It is recommended that all B-Line Safety Grating products be fillet welded per AWS D1.3. For more information, consult Technical Services.

Fastening Anchor Accessories

Anchor Plate

Finish: G-90
mill galvanized
Also available in 304
stainless steel

No field drilling is required.

Part Number Includes

- (1) Anchor Plate
- (2) 3/8"-16 J-Bolts
- (2) 3/8" Flat Washer
- (2) 3/8"-16 Hex Nut

Anchor Plate Assemblies *

UPC Number	Catalog Number	Grating Height	J-Bolt Size	Wt./Ea.
66251634139	ACA15	1 1/2"	3/8"-16 x 1 1/2"	0.80
66251634141	ACA20	2"	3/8"-16 x 2"	0.80
66251634142	ACA25	2 1/2"	3/8"-16 x 2 1/2"	0.80
66251634144	ACA30	3"	3/8"-16 x 3"	0.90

Assembly

1. Align two (2) GRIP STRUT planks side-by-side on I-Beam or other anchoring cross-member.
2. Place J-bolts in GRIP STRUT openings opposite each other. Make sure you choose the openings nearest to the inner edge of the plank .
3. Slide ACA anchor plate up J-bolts until snug. Make sure the inside edge of the ACA anchor plate is as close as possible to the center of the cross member.
4. Tighten nuts until planks are secured.
5. Test for movement or slippage. If GRIP STRUT planks are not secure, check fastening system for loose or missing parts. Repeat steps 1 thru 4.

Note: Do not walk on GRIP STRUT planks if they are not secure. Serious injury could result.

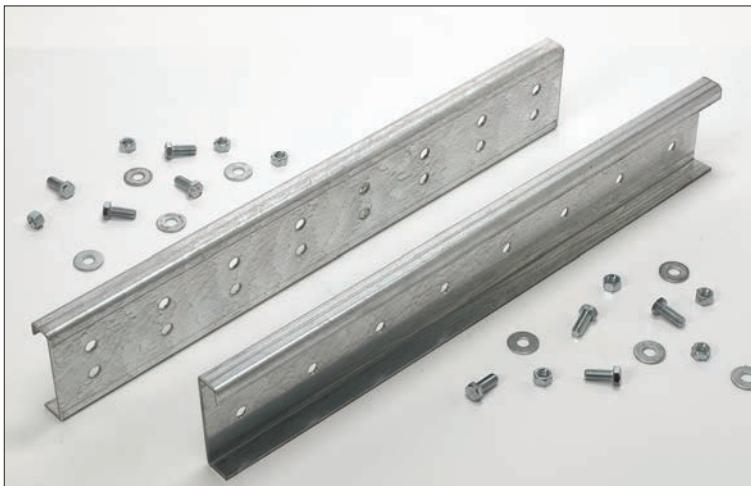

Welding

A common method of fastening safety grating is welding. It is recommended that all B-Line Safety Grating products be fillet welded per AWS D1.3. For more information, consult Technical Services.

Walkway Accessories

Walkway Splice Plate (30" Long) Kit

Part Number Includes

- (2) Splice Plates
- (32) 1/2"-13 x 1 1/4"Hex Bolts
- (32) 1/2"-13 Hex Nuts
- (32) 1/2" Washers

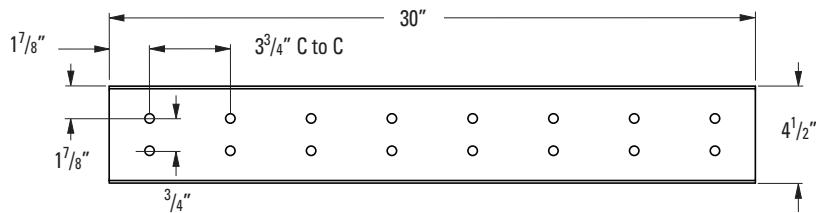

Walkway Splice Plate Kit

UPC Number	Catalog Number	Wt./Ea.
66251642714	SP-10DU-30	18.1

Walkway splice plates provide continuity when multiple lengths of GRIP STRUT™ walkway are desired. Connections are reinforced with the addition of splice plates attached to side channels.

Splice plates are formed from 12 gauge mill-galvanized steel, prepunched and supplied with hardware shown above.

Torque to 40 ft.-lbs.

Walkway Splice Plate (7" Long) Kit

**Part Number Includes**

- (2) Splice Plates - 4" x 7"
- (16) 7/16"-14 x 1¹/₄"Hex Bolts
- (16) 7/16"-14 Hex Nuts
- (16) 7/16" Washers

Kit joins continuous sections together in a run only over supports.

Note: Contact factory for information on pre-punched holes in walkway grating.

Splice plates are formed from 10 gauge mill-galvanized steel, prepunched and supplied with hardware shown above.

Torque to 55 ft.-lbs. (minimum)

Walkway Splice Plate Kit

UPC Number	Catalog Number	Wt./Ea.
66251642716	SP-10DU-7	4.1

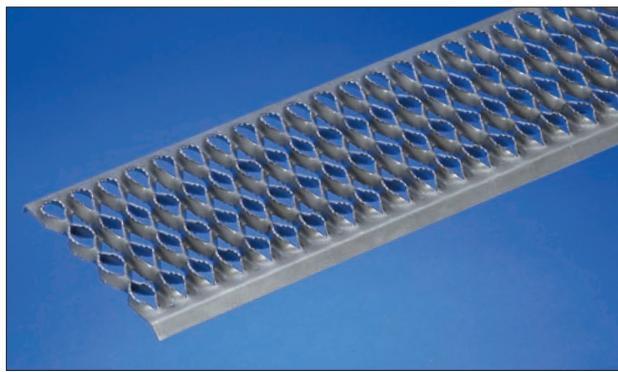

Special & Fabricated Products

Reconditioning Material

Here's the "safety first" way to re-do worn and unsafe floors and stairs - resurface with non-slip GRIP STRUT™ safety grating reconditioning material (RM). GRIP STRUT safety grating is the only product that gives 500 wall-to-wall teeth per square foot. Serrated, diamond-shaped openings make GRIP STRUT safety grating safer than conventional gratings — permit mud, oil, grease and industrial waste to fall through, when used over open floor materials such as bar grating. Even ice shears free under normal foot pressure. Down-turned edges allow grating to lie flat and secure over existing flooring. Consult distributor for product specifications.

Other important GRIP STRUT safety grating advantages include: easy field fabrication and fast, low-cost installation. RM products available on special order in standard materials and sizes.

Reconditioning Material

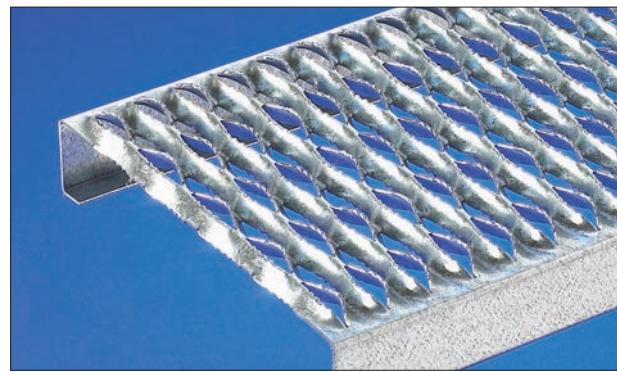

Flat Stock Material

Flat Stock can be manufactured to specified dimensions of flat metal on either or both sides. Consult your distributor for specifications and availability.

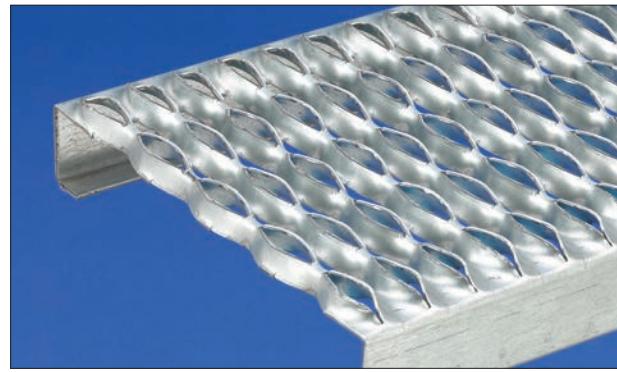

Versatility in form and function for new or special products

Because of its light-weight plank design, GRIP STRUT safety grating is easy to handle and economical to install. Most sections can be handled by one man. Simply and quickly field-cut with standard tools. Layout and erection goes quickly because panels match perfectly. Various widths may be used to suit space requirements.

Many variations of GRIP STRUT safety grating panels are available to suit specific requirements. Special forming can be accomplished to suit requirements not covered by the standard panels. Consult your distributor for availability.

GRIP STRUT with Standard Serrated Surface

GRIP STRUT with Non-Serrated Surface

GRIP STRUT 1-diamond rungs

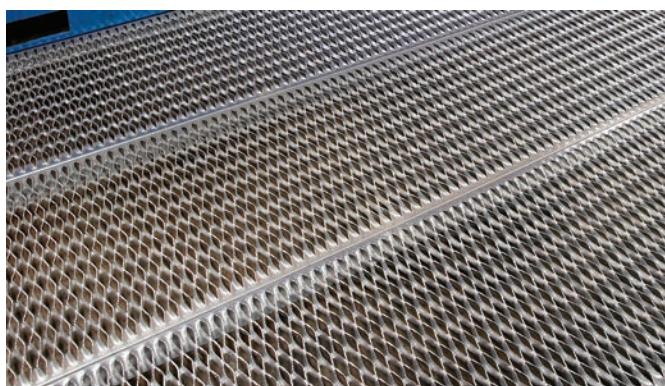

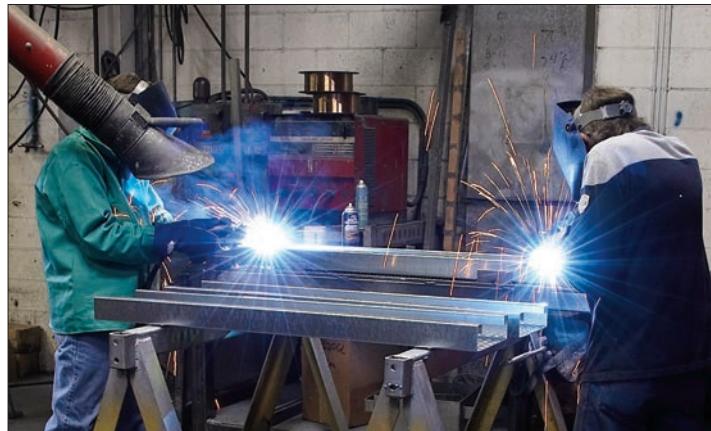

GRIP STRUT Stair Treads

Special & Fabricated Products

Fabricating Services

We can quote large jobs on a lump-sum basis, including detailing and fabricating of special material, to your requirements. Submit plans and specifications through your GRIP STRUT™ safety grating distributor.

After your order is received, a bill of materials and shop drawings will be prepared for your approval before fabrication is begun. A few of the fabricating services available include: special cutting, marking according to layout, banding and toe plates.

GRIP STRUT Stairs & Ramps

Stair Tread Information

Safe Loading — Stair Treads

Load data below takes eccentric loads into consideration. Although load values include allowances for normal impact conditions and usual pedestrian traffic, be sure to make provisions in the structural design for special uses and loads involving unusual impact forces or vibratory forces. Load-carrying capacity of stair treads increases as side channel height and gauge or material increase.

Stair Tread Application

GRIP STRUT Stair Tread

GRIP STRUT Stair Tread with Abrasive Nosing

(1) Stainless Steel not available in 2-Diamond or 3-Diamond widths.

Specifications

Product Guide Specification

Specifier Notes: This product guide specification is written according to the Construction Specifications Institute (CSI) MasterFormat, Three-Part SectionFormat, and PageFormat, contained in the CSI Manual of Practice. Six-digit section numbers are from the MasterFormat, 2004 Edition.

The section must be carefully reviewed and edited by the Engineer to meet the requirements of the project and local building code. Coordinate with other specification sections and the drawings.

Specifier Notes: This section covers Eaton's B-Line Business' slip resistant, GRIP STRUT™ safety grating, grating planks, walkways, treads, ladder rungs and specialty items designed for industrial and commercial walking/working surfaces are included.

SECTION 05 53 00, Metal Gratings (05120) Safety Grating, Slip Resistant Walkways, Platforms and Treads

Part 1- General

1.1 Section Includes

- A. Safety Grating walkways, planks, stair-treads with reticulated and formed metal cross struts.
- B. Regular and Heavy Duty Safety Grating products constructed from single-sheet with integrally-formed channels at the edges.
- C. Slip resistant walkways, planks and stair-treads with stamped surface textures/patterns.

1.2 Related Documents & Sections

Drawings and general provisions of the contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this section. Other related sections include:

- A. 05 51 00, Metal Stairs
 - 05 51 19, Metal Grating Stairs
 - 05 51 13, Metal Ladders
 - 05 51 36, Catwalks
- B. 05 55 00, Metals Stair Treads and Nosings

1.3 Submittals

- A. Submit drawings of Safety Grating products, accessories and attachments.
- B. Submit manufacturer's product data on Safety Grating products including, but not limited to; types, materials, finishes, gauge thickness, surface patterns. For each grating cross-section, submit dimensional information, span, load capacity and deflection requirements.
- C. Shop Drawings:
 1. Show fabrication and installation details, including plans.
 2. Coordination of drawings: Floor plans and sections, drawn to scale. Include scaled layout and relationships between grating and adjacent structural elements.

1.4 References

- A. ASTM A 123 - Standard Specification for Zinc (Hot-Dip Galvanized) Coatings on Iron and Steel Products
- B. ASTM A 240 - Standard Specification for Chromium and Chromium-Nickel Stainless Steel Plate, Sheet, and Strip for Pressure Vessels and for General Applications
- C. ASTM A 653 - Standard Specification for Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy-Coated (Galvannealed) by the Hot-Dip Process
- D. ASTM A 924 - Standard Specification for General Requirements for Steel Sheet, Metallic Coated by the Hot-Dip Process
- E. ASTM A 1011 - Standard Specification for Steel, Sheet and Strip, Hot-Rolled, Carbon, Structural, High-Strength Low-Alloy, and High-Strength Low-Alloy with Improved Formability
- F. ASTM B 209 - Standard Specification for Aluminum and Aluminum-Alloy Sheet and Plate
- G. OSHA-Occupational Safety and Health Administration- Standards for walking-working surfaces. Part Number 1910, Subpart D.
- H. RR-G-1602D- Federal Specification For Safety Grating (other than bar type & excluding naval vessels)
- I. ISO 9001:2000 Quality Management System- Requirements.

1.5 Quality Assurance

- A. Manufacturers: Firms regularly engaged in the manufacture of safety grating of the types required, whose products have been in satisfactory use in similar service for not less than 5 years.
- B. OSHA Compliance: All grating installations must comply with OSHA Standards for walking working surfaces.
- C. Federal Specification RR-G-1602D (or current revision) defines the criteria for items to be considered "safety grating". Slip resistant performance data must be available to support compliance.
- D. Manufacturer must have an ISO registered quality system in place, and Manual available upon request.

1.6 Delivery, Storage and Handling

- A. Deliver safety grating and components carefully to avoid damage, denting and scoring of finishes. Do not install damaged material.
- B. Store materials in original packaging and in clean, dry space; protect from weather and construction traffic. Materials to be elevated off of ground by blocks or skids or pallets.

Part 2 Products

2.1 Acceptable Manufacturers

Safety Gratings: Subject to compliance with these specifications, safety gratings shall be installed as manufactured by B-Line GRIP Strut safety grating (or engineer approved equal).

2.2 Materials and Finish

- A. Hot Rolled, Pickled & Oiled Steel: Commercial steel per ASTM A 1011, minimum yield of 33 ksi.
- B. Mill Galvanized Steel: Commercial steel per ASTM A 653 and ASTM A 924 with G-90 coating designation, minimum yield of 33 ksi.
- C. Hot-Dip Galvanized After Fabrication: Commercial steel per ASTM A 1011, minimum yield of 33 ksi, hot-dip galvanized after fabrication per ASTM A 123.
- D. Aluminum: Alloy 5052, Temper H32 aluminum per ASTM B 209
- E. Stainless Steel: Type 304 (Type 316) stainless steel, 2B or 2D finish, per ASTM A 240.

2.3 Gratings and Components

Safety Grating: (planks)(walkways)(treads)(ladder rungs) shall meet or exceed the Federal Standard RR-G-1602D for Safety Grating.

Part 3 Execution

3.1 Installation

- A. Inspect areas to receive grating for obstacles. Notify the Engineer of conditions that would adversely affect the installation or subsequent utilization of the areas. Do not proceed with installation until unsatisfactory conditions are corrected.
- B. Install grating according to manufacturer's recommendations and as shown on the construction drawings.
- C. Position grating sections flat and square with ends bearing minimum $1\frac{1}{2}$ " on supporting structure.
- D. Keep sections at least $\frac{1}{4}$ " away from vertical steel sections and $\frac{1}{2}$ " from concrete walls.
- E. Allow clearance at joints between sections of maximum $\frac{1}{2}$ " at side channels and maximum $\frac{3}{8}$ " at ends.
- F. Band random cut ends and diagonal or circular cut exposed edges with a minimum $\frac{1}{8}$ " thick bar welded at contact points.
- G. Join abutting walkway sections with manufacturer supplied splice plates; bolted or welded as specified.

END OF SECTION

How To Order

GRIP STRUT™ safety grating and Stair Treads are stocked in all major markets. For the finest in Safety Grating and Stair Treads, contact us or look for your local GRIP STRUT distributor on the internet using www.bline.com.

Catalog number code

The catalog number code given below will assist you in ordering the material according to the specifications required.

1. Steel:

First numeral is width. "5" denotes 5-diamond or 11³/₄" width.

Second and third numerals denote channel size. "20" denotes 2", "15" denotes 1¹/₂", etc.

Last two numbers denote gauge. "12" denotes 12 gauge, "14" denotes 14 gauge.

Standard material is mill galvanized G-90 (ASTM A653)

Example: 52014 = 5-Diamond, 11³/₄" wide, 2" channel, 14 gauge

2. Aluminum:

First numeral is width. "5" denotes 5-diamond or 11³/₄" width.

Second and third numerals denote channel size. "20" denotes 2", "15" denotes 1¹/₂", etc.

Last two numbers denote gauge. "10" denotes .100" thick, "12" denotes .080" thick.

Material -A: Denotes aluminum.

Example: 52012-A = 5-Diamond, 11³/₄" wide, 2" channel, .080 thick, aluminum

3. Stainless Steel:

First numeral is width. "5" denotes 5-diamond or 11³/₄" width.

Second and third numerals denote channel size. "20" denotes 2", "15" denotes 1¹/₂", etc.

Last two numbers denote gauge. "16" denotes 16 gauge.

Material - S = Type 304, SL = 316L

Example: 52016-S = 5-Diamond, 11³/₄" wide, 2" channel, 16 gauge, Type 304 stainless

4. Stair Treads:

Any of the above numbers preceded by "T-"

Example: T-42014 = 4-Diamond, 9¹/₂" wide, 2" channel, 14 gauge, steel stair tread

5. Plain:

For ordering purposes, any catalog number followed by "B" signifies plain unpainted steel (HRP&O).

Example: 52012-B = 5-Diamond, 11³/₄" wide, 2" channel, 12 gauge, plain steel

6. Special Products:

Consult local GRIP STRUT safety grating distributor for identification and order placement of special products not herein identified.

Standard Sizes:

Length: (nominal 10'-0" and 12'-0")

Tolerances:

Planks: Standard 10'-0" and 12'-0" lengths are 120" and 144" respectively, with a tolerance of -0" +¹/₄".

Special lengths are available.

Treads: Standard stair tread lengths are as shown in this catalog with tolerances of ± ¹/₈".

Raw Materials:

Finishes:

A) Steel:

1) Pre-galvanized - ASTM A525

2) 14 gauge: hot rolled, commercial quality, oiled black steel and commercial quality, commercial coating, chemically treated galvanized steel

3) 12 gauge: hot rolled, pickled and oiled, commercial quality black steel and commercial quality, commercial coating, chemically treated galvanized steel

B) Aluminum: Alloy 5052 H-32 mill finish

C) Stainless Steel: 2B finish - 316L (light, cold rolled) — 2D finish - 304 (cold rolled)

Fabrication service: On large jobs, we estimate, quote, detail, and fabricate to your requirements. Lump-sum quotations are made from submitted plans and specifications. After receipt of order, a bill of materials and necessary layout drawings are prepared. Grating is supplied with special cutting, banding and toe plates installed where needed. Stair treads are also available fabricated and non-serrated. This fabrication service is available through GRIP STRUT safety grating distributors.

Installation Recommendations

General Installation Recommendations

Recommended Clearance

Steel: $\frac{1}{4}$ " minimum is recommended at perimeter and $\frac{3}{8}$ " maximum at end joints. Maximum between panels is $\frac{1}{4}$ "; $\frac{1}{8}$ " is generally used.

Concrete: Concrete form deflection calls for slightly greater perimeter clearance. $\frac{1}{2}$ " is recommended. (Maximum between panels is $\frac{1}{4}$ ").

Bearing Surfaces

Recommended minimum bearing $1\frac{1}{2}$ ". Surfaces supporting GRIP STRUT™ safety grating must be smooth and level to insure that adjoining sections provide a safe, even walking surface.

Permanent Installation

GRIP STRUT™ safety grating is easily welded to supports for permanent installations. Channels are quickly welded together between supports to provide uniform deflection in adjacent panels.

For welded-attachment, secure side channels to supports by fusion welding with $\frac{1}{8}$ " fillet welds, 1" long. Weld adjacent planks together with $\frac{1}{8}$ " fillet welds, 1" long, 24" on center staggered top and bottom.

Install GRIP STRUT safety grating according to details as shown on individual job drawings, or as follows:

- (1) Single width applications. Utilizing the anchoring device or weldings, attach GRIP STRUT safety grating plank at every point of contact with supporting structure around perimeter of plank.
- (2) Multiple width applications. Utilizing the GRIP STRUT safety grating anchoring device or welded as recommended by A.I.S.I., attach grating plank around the perimeter at each point of contact with supporting structure. In field of platform, attach plank to supporting structure with a minimum of one attachment at each end of plank on alternate sides.

When span exceeds 8 feet, weld or bolt side channels of adjacent planks together at midpoint of span.
(When spans exceed 6 feet, consider similar treatment.)

U.S. Customer Service Center is staffed Monday through Friday from 7 a.m. to 5:00 p.m. Central Standard Time.
